

# Z-Skids™

*Where ground-engaging wear is at its worst,  
Z-Skids are the solution.*

The skids on bush hogs and boom-mounted or pull-behind rotary mowers are in constant contact with the ground, grinding away at the fabricated steel or cast OEM wear skids. Materials such as asphalt, granite, gravel, sand, and dirt are extremely tough on equipment.

Z-Skids feature solid Tungsten Carbide, which is proven to withstand years of work on mowers and bush hogs.

We manufacture wear-proofed Tungsten Carbide Z-Skids to fit most boom-mounted or pull-behind rotary mowers – such as Tiger, Diamond, Schulte, and Bush Hog – and can also custom engineer and manufacture Z-Skids of any size or shape.

The OEM skid on a Tiger mower typically lasts just a few months, requiring a replacement about twice per mowing season.

With Tungsten Carbide Z-Skids, the same Tiger mower has required zero replacements after four mowing seasons, and is still going strong!

We can custom engineer and manufacture Z-Skids for any machine that sees ground-engaging wear.

## Case Study: State DOT sees increased skid life of 400%

*The Department of Transportation for one southeast state is reaping the benefits of applying Tungsten Carbide Z-Skids to their Bush Hogs. In one season, the OEM skid was replaced so often that the DOT was forced to use a plow blade instead of a mower skid. Meanwhile, the Z-Skid on their other mower showed minimal wear.*

Customer skid replaced 4 times in one season

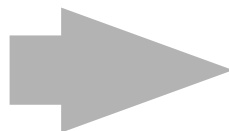

Z-Skid still going strong

## Features & Benefits:

- F:** Solid Tungsten Carbide is one of the most abrasion-resistant materials available.
- B:** Z-Skids perform many years beyond OEM skids.
- B:** With longer wear life, machines can operate longer and require less maintenance.
  
- F:** We can custom manufacture Z-Skids for all manufacturers and deck sizes or can upgrade your existing skid to a Z-Skid.
- B:** We have the capabilities to enhance any mower with Z-Skid technology.
- B:** Z-Skids reduce operating costs and increase production.
